## **ACKNOWLEDGEMENT**

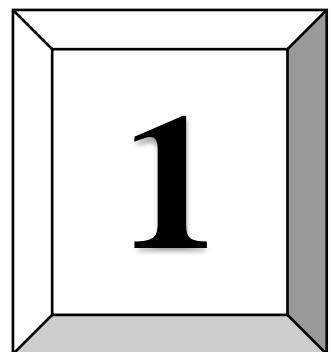

We would like to give our sincere acknowledgement to everybody responsible for the successful completion of our project “**Smart Vehicle System**”.

The success and final outcome of this project required a lot of guidance and assistance from many people and we are extremely privileged to have got this all along the completion of this project.

We owe our deepest gratitude to our project guide **Ta. Vedant Dave**, who took interest on our project work and guided us all along till the completion of our project work by providing all the necessary help for developing a good Database System. We would also like to admiringly acknowledge **Prof. Minal Bhise** for moral support which helped us to accomplish our goal.

We would also like to thank all our lecturers.

Last but not the least we are also thankful to all friends & those who have contributed directly or indirectly by giving their suggestions or even a advice for the completion of this project.

## **Section : SRS Document**

---

- **Introduction**

The smart car can be recognized as a mix between the self-driving car and the connected car. It cannot only drive autonomously but, thanks to the Internet connection, can share the access to the network with user and allow the usage of its data to devices that are located insiders remotely. In a short time, it will be possible to misremember “**the old metal box on four wheels**” because the cars that will be driven shortly will be smarter and will allow performing actions unimaginable until recently.

However, a significant difficulty to be faced in the development of driverless vehicles concerns the skills of the passenger. In fact, should he/she be only transported or could he/she decide from time to time? As every commuter knows, everyday driving is often dull, and being a mere passenger can be even more so. Furthermore, there are still many problems to be solved, so that the massive diffusion of the autonomous vehicles (AV) is realized: here are five issues that must be resolved before autonomously driven cars can take diffusion furrow the roads

- **Higher performance and redundant software**
- **More advanced and capillary maps**
- **More efficient and precise sensors**
- **Better vehicle-to-vehicle (V2V) and vehicle-to-infrastructure (V2I) communications**

- **Purpose of System :**

In recent years, the smart car sector has been increasing enormously in the **Internet of Things (IoT)** market. Furthermore, the number of smart cars seems set to increase over the next few years.

This goal will be achieved because the application of recent IoT technologies to the automotive sector opens up innovative opportunities for the mobility of the future, in which connected cars will be more and more prominent in smart cities. This paper aims to provide an overview of the current status and future perspectives of smart cars, taking into account technological, transport, and social features.

An analysis concerning the approaches to making smart a generic car, the possible evolutions that could occur in the coming decades, the characteristics of 5G, ADAS (advanced driver assistance systems), and the power sources is carried out in this paper.

- **Existing Problem :**

- Creating and maintaining maps for self-driving cars is difficult work
- Dead or Discharged Battery
- Engine Overheating
- Low fuel mileage
- Exhaust Smoke
- Low AC Cooling
- The Car Keeps Overheating

- **Scope :**

- Car sensors make driving an easy task.
- The sensors can easily detect faulty components in a vehicle.
- Sensors ensure that the engine is maintained correctly.
- Sensors also enable automatic control of specific functions such as windscreen wipers, headlights, etc.
- The ECU can make precise adjustments with the information received from sensors.
- Sensors can also relay warning information to the driver if there is any fault/malfunction with the car's components.

- **Literature Review :**

- **AI (Artificial Intelligence) :**

Smart cars rely on AI in relation to three specific domains: sensor fusion, route planning, and the use of AI and Big Data for multiple levels of data classification and delivery of results.

Smart cars are projected to use on-board AI capabilities in the immediate future, with further support provided by cloud-based AI services. But as cloud and ICT technologies improve and innovate, cloud-based AI support is expected to become the primary director of smart cars, allowing them to perform functions such as determining the speed and direction at which other cars and people are moving, or indeed whether the objects it senses are people or cars or even a barrier.

- **IoT (Internet of Things) :**

By endowing cars with more sensors, processors and software, passenger vehicles will become integrated carriers of digital transformation.

Indeed, companies which have traditionally belonged to the manufacturing industry are converting to be more service-oriented. In order to fully investigate IoT's capabilities in relation to the development of smart cars, we need to understand what exactly is IoT.

- **Assumption**

- Vehicles are already available for use
- Roles and responsibilities are already established.
- “Driving” with smart vehicle will be significantly safer than with human-operated vehicles.
- Smart Vehicle will integrate into the Smart City
- Smart vehicle will substantially increase road efficiency, as well as roadway usage.
- Smart vehicle will comprise a mobility platform.
- Whether or when and to what extent technological barriers to fully smart vehicles will be overcome.

## A) Requirements Collection Documentation

- **Requirement collection phase :**

In our system we have different types of requirement collection phases like:

**Brainstorming:** Brainstorming is used in requirement gathering to get as many ideas as possible from group of people. Generally used to identify possible solutions to problems, and clarify details of opportunities.

**Interview:** Interviews of stakeholders and users are critical to creating the great software. Without understanding the goals and expectations of the users and stakeholders, we are very unlikely to satisfy them. We also have to recognize the perspective of each interviewee, so that, we can properly weigh and address their inputs. Listening is the skill that helps a great analyst to get more value from an interview than an average analyst.

**Observation:** By observing users, an analyst can identify a process flow, steps, pain points and opportunities for improvement. Observations can be passive or active (asking questions while observing). Passive observation is better for getting feedback on a prototype (to refine requirements), where active observation is more effective at getting an understanding of an existing business process. Either approach can be used.

**Survey/Questionnaire:** When collecting information from many people – too many to interview with budget and time constraints – a survey or questionnaire can be used. The survey can force users to select from choices, rate something (“Agree Strongly, agree...”), or have open ended questions allowing free-form responses. Survey design is hard – questions can bias the respondents.

**Document Analysis:** Reviewing the documentation of an existing system can help. In an ideal world, we would even be reviewing the requirements that drove creation of the existing system – a starting point for documenting current requirements.

- **FACT FINDING CHART**

<b>Objective</b>	<b>Technique</b>	<b>Subject(s)</b>	<b>Time commitment</b>
To Enhance Productivity and Achieve Innovation	Background reading	Business reports, Different platforms websites	Half day
To get an idea of users' observation and requirements for the smart vehicle system	Questionnaire	users of the smart vehicle system	One Day
To find out how the existing smart system is used. to evaluate the effectiveness of the existing system	Interview	Computer manager, E.C. Engineer	Two Hour
To provide more specifications for a new system	Interview	Creative Team of Three people	Three Hour

- **AlphaTech: Interview Plan**

**System:** Smart Vehicle

**Project Reference:** SF/SJ/2003/12

**Participants:** Suresh Kumar (AlphaTech)

Sarvik  
Vaghasiya  
Rudrik  
Prajapati

**Date:** 01/09/2022

**Time:** 15:00 To 16:00

**Duration:** 1 Hour

**Place:** Suresh's Office

**Purpose of Interview:**

To discuss the most common problems encountered in smart cars and to see how to approach solutions.

**Agenda:**

- Problems with sensors and other facilities
- Present system process
- Implement action

**Documents to be brought to the interview:**

- A rough idea about the system
- Additional requirements for the system

- **AlphaTech: Interview Summary**

**System:** Smart Vehicle

**Project Reference:** SF/SJ/2003/12

**Participants:** Suresh Kumar (AlphaTech)

Sarvik Vaghasiya

Rudrik Prajapati

**Date:** 01/09/2022

**Duration:** 1 Hour

**Time:** 15:00 To 16:00

**Place:** Suresh's Office

### **Summary of Interview:**

1. Noises from the engine and fuel spills are also forms of pollution to the environment.
2. Most smart cars are designed with this in mind. They may be lighter but the safety features can match any normal vehicle.
3. Injury Reduction & Accident Prevention because of a smart system. Since they have an automatic system, they aren't going to do as much damage.
4. A Smart Vehicle could be a wonderful investment that will definitely help the environment and save you tasks of money in the long run.
5. Attacker groups range from the owner of the vehicle to a specialized hacker with advanced tools
6. By driving more efficiently when in search of parking space, you will save on fuel waste. Resulting in spending less money on petrol.
7. There are fewer chances for vehicle vandalism.
8. It may be a bit confusing for unfamiliar users.
9. It requires a maintenance contract with the supplier.
10. The use of redundant systems will result in a greater cost.
11. There may be a fear of breakdown.

## SMART VEHICLE SYSTEM - SURVEY

*Please mark your answers to the following questions*

---

**1. What details do you frequently observe?**

Car temperature / Service reminder / Tyre pressure / Petrol-Oil indicator

**2. Does the collision sensor-warning system work properly?**

Perfect / Sometimes / Doesn't work

**3. Does the lane departure warning system work properly?**

Perfect/ Sometimes / Doesn't work

**4. Does your added family member get vehicle data from time to time?**

Yes / No/ Hasn't shared it with anyone yet

**5. Does the Onboard diagnostics (OBD) system that performs diagnosis and reports any trouble like how many KM vehicles will run, service reminders etc...work perfectly?**

Yes / No / Not Accurate

**6. How old is the vehicle (In Year)?**

1-2-3-4-5-6-7-8-9-10

**7. How often does a vehicle need to be serviced to fix a vehicle problem (In Month)?**

3-6-9-12

**8. How much does the smart vehicle park assist system help you while parking? (Rate in 1-5)**

1-2-3-4-5

**9. Would you like to see any more details about the vehicle if yes then what is it?**

Yes / No / Don't mind

---

---

**10. Please note any comments you have on the current smart vehicle system.**

---

---

**11. Please note any suggestions for improving the smart vehicle system.**

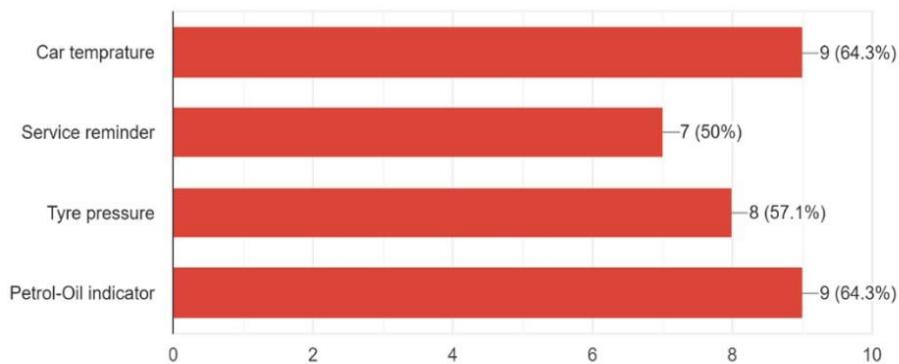

---

---

- **Observation of Survey:**

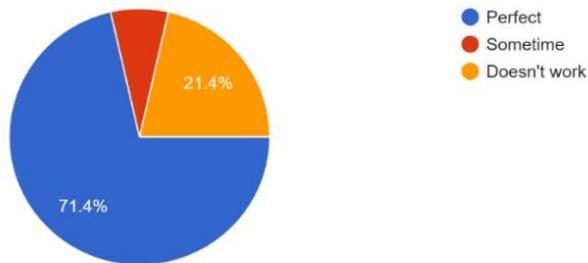

What details do you frequently observe?

14 responses

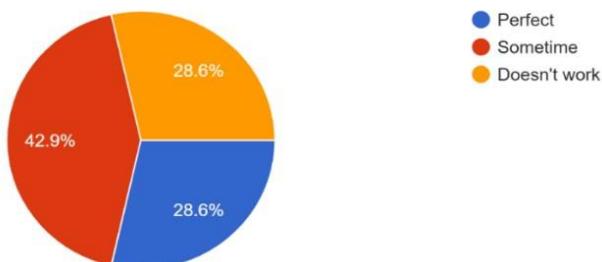

Is collision sensor-warning system work properly?

14 responses

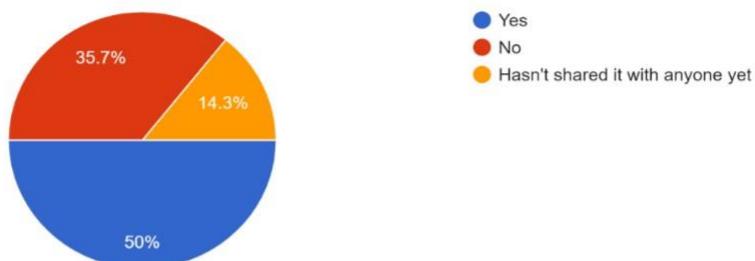

Is lane departure warning system work properly?

14 responses

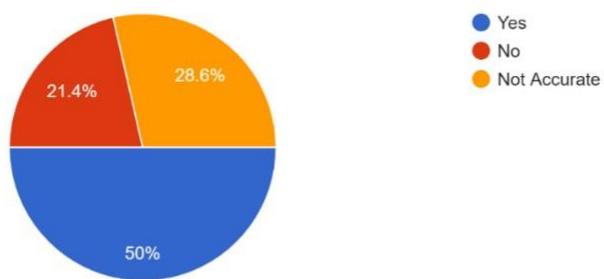

Does your added family member get vehicle data from time to time?

14 responses

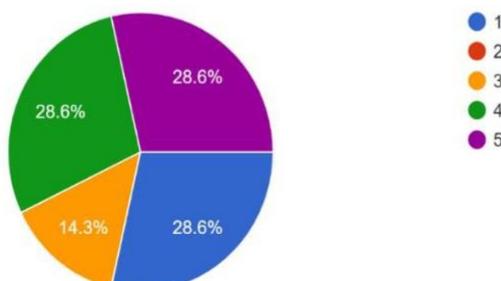

Is On-board diagnostics (OBD) system that performs diagnosis and reports any trouble like how many KM vehicle will run,service reminder etc...work perfectly?

14 responses

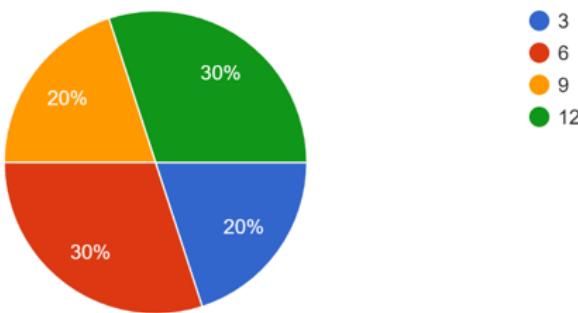

How much does the smart vehicle park assist system help you while parking?

14 responses

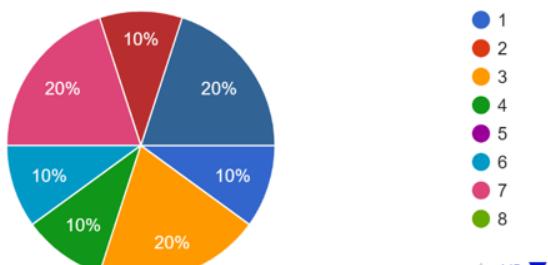

How often does a vehicle need to be serviced to fix a vehicle problem (In Month)?

10 responses

How old is the vehicle (In Year)?

10 responses

## Observations:

- We have observed that most people review that collision sensor work almost perfect but over lane departure warning system only sometimes they are not confidence about it and also. To solve these problems, we have to work on lane departure warning system and also sharing data with family is not work that accurately, so lots of engineering work we need to improve.
- We have observed that most people have lots of confusion about Data sharing system with family and they see all these system processes very difficult.
- So, we will provide proper information about smart vehicle features and make the system more user friendly. We will give better and easier experience for using all smart vehicle system features.

## **B) List of requirements**

- Remote Monitoring for
  - Individual Vehicle's location
  - Identification of each vehicle with time-stamp
  - Identification of each vehicle's driver
  - Vehicle status like fuel level, light, Door, Ignition.
- Remote Control for
  - Individual Vehicle's Ignition On / OFF
  - Individual vehicle's Door Open / Close
  - Each Vehicle's Fuel ON / CUT-OFF
  - Each Vehicle's Light ON / OFF
- Detection of unauthorized access of the vehicle for theft control.
- Fuel management like usage, available, mileage purpose.
- In places where GSM coverage is not there, system should store the updates and forward it when it returns to GSM coverage area.
- Should allow automatic switching between SMS and GPRS, when vehicle moves to a location where there is poor GSM coverage or GPRS is not present.

## C) Identification of Constraints

### • Business Constraints

Business constraints are unchangeable business decisions that in some way restrict the software architecture design. Business constraints are similar to technical constraints in that they are decisions that cannot be changed, but rather than influencing structures directly through technology, the influence occurs indirectly through business decisions. It might be easiest to discuss some examples.

**Time:** it will take lots of time to manufacture smart vehicle because we can't manufacture vehicle without knowing any requirements and also research on particular sensor.

**Materials:** for manufacture or production we require uses of heavy materials because We don't know what kind of problems may occur in smart vehicles after a long time. We will make only after analyzing the materials.

**People and manpower:** for manufacture smart vehicle we require average manpower, those who are good in sensor related and automobile related filed.

**Money:** this system is very costly because the production of smart vehicle will use more equipment such as sensors, materials are more expensive

**Team composition and make-up:** In some cases, there may be requirements that specific personnel be used or not used during project. For example, someone may be unavailable, already committed to another project or you may be required to include specific individuals, perhaps for training purposes.

**Capital resources:** here lots of sensors are use so our main requirement is sensors materials and IoT related things.

## D) Identification of various categories of users and their privileges

- **User Categories**

- System Admin
- Customer
- Different type of Employee (manager, staff etc...)
- Service contractor
- Vehicle Approver

- **Privileges**

Control policies in order to issue privileges to drivers or applications (such as the deployment of fair bags or speed limit control) according to their credentials or claims. These privileges are used to decide whether to allow access to the car or not. It also continuously monitors subject claims, resource attributes and environmental conditions such as time or location so that if a change is made. Moreover, the system can re-evaluate policies, provide updates or revoke issued privileges and usage decisions accordingly.

The claims within the credentials can be continuously evaluated in order to ensure that the vehicle is safe. According to the researchers, this work is vital in comprehensively taking care of the safety and security of the smart cars of the future.

Infotainment and content

- Web Browsing
- Media and entertainment
- Communication

Telematics

- Navigation
- Insurance
- Emergency Services
- Diagnostics, prognostics

Vehicle-to-X communications

- Infrastructure (e.g., toll plazas, traffic signals)
- Other vehicles (e.g., crash avoidance)

Autonomous operation

- Cruise control
- Lane detection
- Auto Park
- Collision avoidance
- Self-driving vehicles

## **E) Any other relevant information**

### **Sensors Summary :**

#### **➤ Air-flow sensor**

It measures the density and volume of the air entering the combustion chamber.

#### **➤ Engine knock sensor**

It monitors engine knocking and ensures the air-fuel mixture is ignited correctly.

#### **➤ Engine speed sensor**

It monitors the spinning speed and position of the crankshaft.

#### **➤ Camshaft position sensor**

It monitors the position and proper timing of the camshaft.

#### **➤ Manifold Absolute Pressure (MAP) sensor**

Monitors engine load by measuring the difference between the manifold and outside pressure.

#### **➤ Throttle position sensor**

Monitor the position of the throttle valve.

#### **➤ Voltage sensor**

It manages the idling speed of the vehicle.

#### **➤ Temperature sensor**

It monitors the engine temperature.

#### **➤ Speed sensor**

It measures the speed of the wheels.

#### **➤ Parking sensor**

It recognizes any obstacle present in the front or rear of the vehicle.

- **Noun Analysis Table :**

All noun	Useful noun	Repeated noun
<ul style="list-style-type: none"> <li>● Sensor</li> <li>● Measures</li> <li>● Engine</li> <li>● Years</li> <li>● Car</li> <li>● Sector</li> <li>● IoT</li> <li>● Cars</li> <li>● Paper</li> <li>● Driver</li> <li>● Speed</li> <li>● Position</li> <li>● Vehicle</li> <li>● Low</li> <li>● Car</li> <li>● Sensors</li> <li>● Components</li> <li>● Sensors</li> <li>● Information</li> <li>● Summary</li> <li>● Density</li> <li>● Volume</li> <li>● Air</li> <li>● Combustion</li> <li>● chamber</li> <li>● air-fuel</li> <li>● Mixture</li> <li>● Crankshaft</li> <li>● Camshaft</li> <li>● timing,</li> <li>● Manifold,</li> <li>● Pressure,</li> <li>● MAP,</li> <li>● Monitors,</li> <li>● load,</li> <li>● difference,</li> <li>● manifold,</li> <li>● pressure,</li> <li>● Throttle,</li> <li>● Monitor,</li> <li>● throttle,</li> <li>● valve,</li> <li>● Voltage,</li> <li>● Temperature,</li> </ul>	<ul style="list-style-type: none"> <li>● Sensor</li> <li>● Engine</li> <li>● Car</li> <li>● IoT</li> <li>● Driver</li> <li>● Speed</li> <li>● Position</li> <li>● Vehicle</li> <li>● Components</li> <li>● Density</li> <li>● Volume</li> <li>● Air</li> <li>● Chamber</li> <li>● Air-fuel</li> <li>● Manifold</li> <li>● Pressure</li> <li>● Map</li> <li>● Monitors</li> <li>● Throttle</li> <li>● Valve</li> <li>● Voltage</li> <li>● Temperature</li> <li>● Wheels</li> <li>● Parking</li> <li>● Obstacle</li> <li>● system</li> <li>● Internet</li> <li>● Market</li> <li>● Number</li> <li>● Goal</li> <li>● Technology</li> <li>● Opportunities</li> <li>● Mobility</li> <li>● Cities</li> <li>● Account</li> <li>● Transport</li> <li>● Features</li> <li>● Analysis</li> <li>● Approaches</li> <li>● Assistance</li> <li>● Sources</li> <li>● Work</li> <li>● Dead</li> <li>● Battery</li> </ul>	<ul style="list-style-type: none"> <li>● Sensor</li> <li>● Measures</li> <li>● Engine</li> <li>● Years</li> <li>● Car</li> <li>● Sector</li> <li>● IoT</li> <li>● Cars</li> <li>● Paper</li> <li>● Driver</li> <li>● Speed</li> <li>● Position</li> <li>● Vehicle</li> <li>● Low</li> <li>● Sensors</li> <li>● Components</li> <li>● Information</li> <li>● Summary</li> <li>● Density</li> <li>● Volume</li> <li>● Air</li> <li>● Combustion</li> <li>● chamber</li> <li>● air-fuel</li> <li>● Mixture</li> <li>● Crankshaft</li> <li>● Camshaft</li> <li>● timing</li> <li>● Manifold</li> <li>● Pressure</li> <li>● MAP</li> <li>● Monitors</li> <li>● load</li> <li>● difference</li> <li>● manifold</li> <li>● pressure</li> <li>● Throttle</li> <li>● Monitor</li> <li>● throttle</li> <li>● valve</li> <li>● Voltage</li> <li>● Temperature</li> <li>● temperature</li> <li>● wheels</li> </ul>

## • ER Diagram

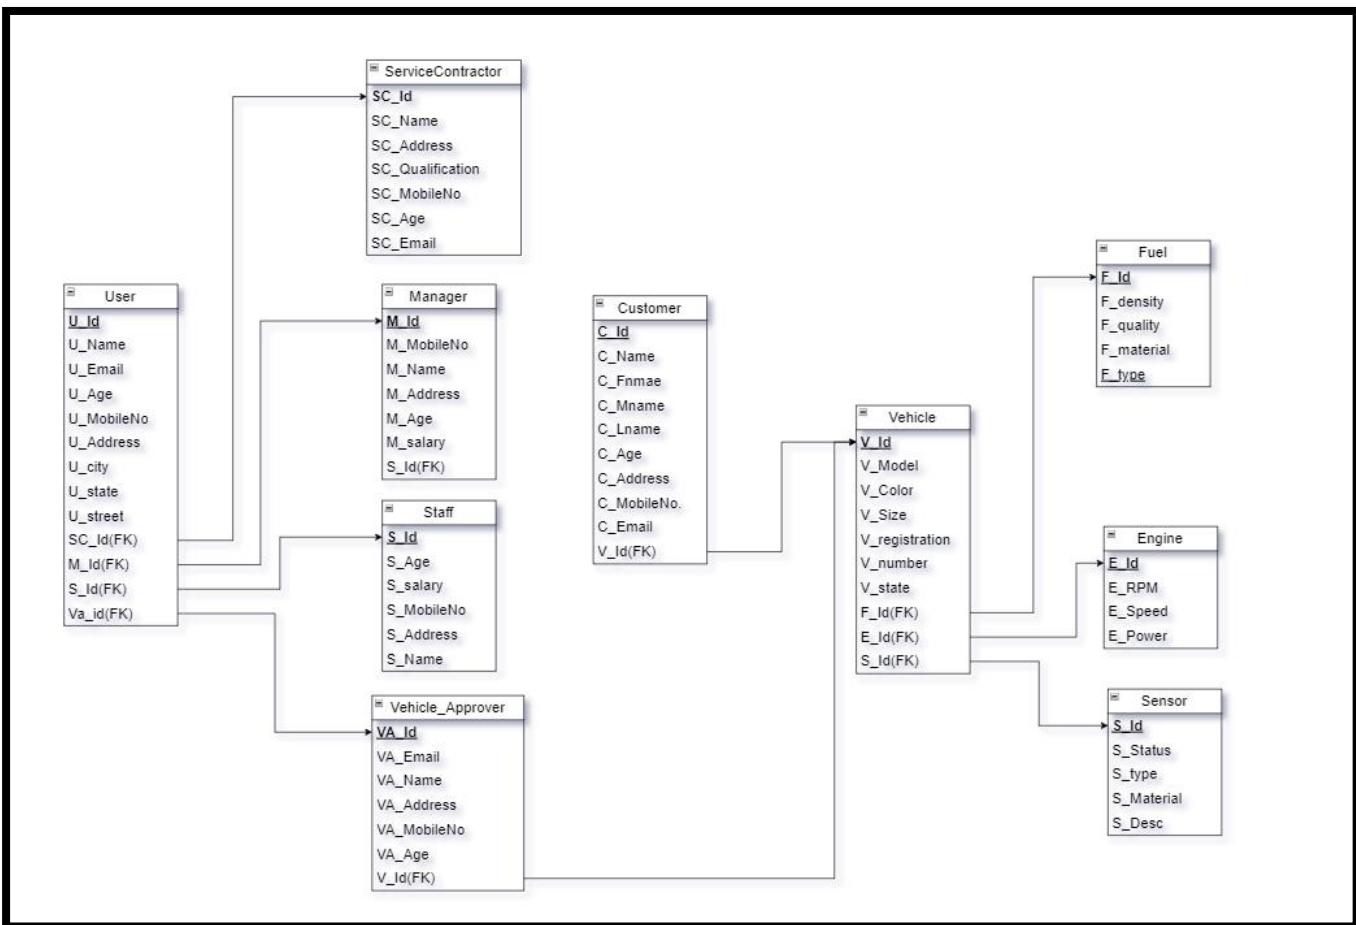

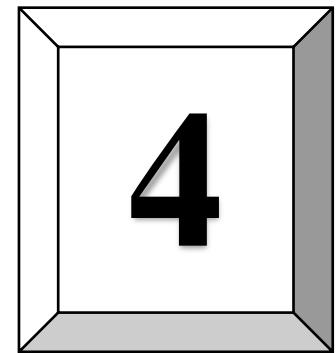

## **Section : ER to relational mapping document**

---

- Schema Diagram

## **Section : Final list of relations with attributes and constraints**

---

- **Relational Table :**

- **Customer**

<b>Field Name</b>	<b>Data Type</b>	<b>Description</b>	<b>Constraints</b>
c_id	Integer	ID of Customer	Primary Key
v_id	Integer	ID of vehicle	Foreign Key
c_fname	varchar(20)	First Name of customer	NOT NULL
c_lname	varchar(20)	Last Name of customer	NOT NULL
c_age	Integer	Age of customer	NOT NULL
c_address	varchar(50)	Address of customer	NOT NULL
c_mobileno	Integer	Mobile number of customer	NOT NULL
c_email	varchar(50)	Email of customer	NOT NULL

- **Engine**

<b>Field Name</b>	<b>Data Type</b>	<b>Description</b>	<b>Constraints</b>
e_id	Integer	Id of engine	Primary Key
e_rpm	Integer	Revolution per minute of engine	NOT NULL
e_speed	Integer	Speed of engine	NOT NULL
e_power	Integer	Power of engine	NOT NULL

- **Fuel**

<b>Field Name</b>	<b>Data Type</b>	<b>Description</b>	<b>Constraints</b>
f_id	Integer	Id of fueltype	Primary Key
f_type	varchar(20)	Fuel type e.g. gas , liquid, solid	NOT NULL
f_quality	varchar(20)	Quality of fuel	NOT NULL
f_density	varchar(20)	Density of fuel	NOT NULL
f_material	varchar(20)	Major material in fuel	NOT NULL

➤ Manager

Field Name	Data Type	Description	Constraints
m_id	Integer	Id of manager	Primary Key
m_name	varchar(30)	Name of manager	NOT NULL
m_age	Integer	Age of manager	NOT NULL
m_address	varchar(50)	Address of manager	NOT NULL
m_mobileno	Integer	Mobile number of manager	NOT NULL
m_salary	integer	Salary of manager	NOT NULL

➤ Sensor

Field Name	Data Type	Description	Constraints
s_id	Integer	Id of sensor	Primary Key
s_type	Varchar(50)	Type of sensor	NOT NULL
s_material	Varchar(50)	Material used in sensor	NOT NULL
s_status	Boolean	Status of sensor active or not active	NOT NULL
s_desc	Char(100)	Description of sensor	NOT NULL

➤ Service contractor

Field Name	Data Type	Description	Constraints
Sc_id	Integer	Id of service contractor	Primary Key
Sc_name	Varchar(20)	Name of service contractor	NOT NULL
Sc_age	Integer	Age of service contractor	NOT NULL
Sc_qualification	Integer	Qualification of service contractor	NOT NULL
Sc_address	Varchar(50)	Address of service contractor	NOT NULL
Sc_mobileno	Integer	Mobile number of service contractor	NOT NULL
Sc_email	Varchar(40)	Email of service contractor	NOT NULL

➤ Staff

Field Name	Data Type	Description	Constraints
S_id	Integer	Id of staff	Primary Key
S_name	Varchar(20)	Name of staff	NOT NULL
S_age	Integer	Age of staff	NOT NULL
S_gender	Varchar(15)	Gender of staff	NOT NULL
S_address	Varchar(50)	Address of staff	NOT NULL
S_mobileno	Integer	Mobile number of staff	NOT NULL
S_salary	integer	Salary of staff	NOT NULL

➤ User

Field Name	Data Type	Description	Constraints
U_id	Integer	Id of user	Primary Key
Sc_id	Integer	Id of service contractor	Foreign Key
Va_id	Integer	Id of Vehicle approver	Foreign Key
U_name	Varchar(25)	Name of user	NOT NULL
U_age	Integer	Age of user	NOT NULL
U_street	Varchar(30)	Street of user	NOT NULL
U_city	Varchar(30)	City of user	NOT NULL
U_state	Varchar(30)	State of user	NOT NULL
U_mobileno	Integer	Mobile number of user	NOT NULL
U_email	Varchar(50)	Email of user	NOT NULL
M_id	Integer	Id of manager	Foreign Key
S_id	Integer	Id of staff	Foreign Key

➤ Vehicle

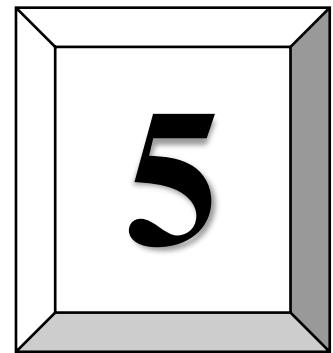

Field Name	Data Type	Description	Constraints
V_id	Integer	Id of vehicle	Primary Key
S_id	Integer	Id of staff	Foreign Key
E_id	Integer	Id of engine	Foreign Key
V_model	Varchar(20)	Model number of vehicle	NOT NULL
V_color	Varchar(20)	Color of vehicle	NOT NULL
V_size	Varchar(20)	Size of vehicle	NOT NULL
V_registration	Date	Registration of vehicle	NOT NULL
V_state	Varchar(50)	State of vehicle	NOT NULL
V_number	Varchar(30)	Number of vehicle	NOT NULL
F_id	integer	Id of fuel type	Foreign Key

➤ **Vehicle approver**

<b>Field Name</b>	<b>Data Type</b>	<b>Description</b>	<b>Constraints</b>
Va_id	Integer	Id of Vehicle approver	Primary Key
V_id	Integer	Id of vehicle	Foreign Key
Va_name	Varchar(30)	Name of Vehicle approver	NOT NULL
Va_age	Integer	Age of Vehicle approver	NOT NULL
Va_address	Varchar(50)	Address of Vehicle approver	NOT NULL
Va_mobileno	Integer	Mobile number of Vehicle approver	NOT NULL
Va_email	Varchar(50)	Email of Vehicle approver	NOT NULL

- **Relationship Cardinality :-**

<b>Entity 1</b>	<b>Relationship</b>	<b>Entity 2</b>	<b>Cardinality</b>
Engine	Uses	Fuel	One-to-One
Vehicle	Has	Engine	One-to-One
Vehicle	Has	Sensor	One-to-Many (Total participation for many side)
Vehicle Approver	Approves	Vehicle	One-to-Many (Total participation for many side)
Customer	Purchased	Vehicle	One-to-Many (Total participation for many side)
User	Provide Service	Customer	One-to-Many (Total participation for many side)
User	Maintain	Service Contractor	One-to-One
User	IS A	Manager	One-to-One
User	IS A	Staff	One-to-One

## **Section : DDL statements for creating all the tables**

---

## 1) Table Name : Customer

```
CREATE TABLE IF NOT EXISTS vehicle.customer
(
    c_id integer NOT NULL,
    v_id integer,
    c_fname character varying(20) COLLATE pg_catalog."default",
    c_mname character varying(20) COLLATE pg_catalog."default",

## **Section : List of Queries for your database**

---

## 1. Show all vehicle info where state is not null

```
select * from vehicle.vehicle where v_state notnull
```

The screenshot shows a database query interface with the following details:

- Query Tab:** Contains the SQL query: `select * from vehicle.vehicle where v_state notnull`.
- Data Output Tab:** Displays the results of the query in a table format.
- Table Headers:** The columns are labeled: `v_id`, `s_id`, `e_id`, `f_type`, `v_model`, `v_color`, `v_size`, `v_registration`, `v_state`, and `v_number`.
- Table Data:** The table contains 49 rows of vehicle information. Some sample rows include:
  - Row 1: v\_id=4, s\_id=4, e\_id=4, f\_type=liquid, v\_model=2008, v\_color=Red, v\_size=3XL, v\_registration=2022-10-25, v\_state=Île-de-France, v\_number=1G6DA8EGXA0502277
  - Row 2: v\_id=10, s\_id=10, e\_id=10, f\_type=gas, v\_model=2004, v\_color=Green, v\_size=3XL, v\_registration=2021-11-25, v\_state=Södermanland, v\_number=1D7RB1CT4AS013259
  - Row 3: v\_id=21, s\_id=21, e\_id=21, f\_type=gas, v\_model=2001, v\_color=Crimson, v\_size=M, v\_registration=2022-08-23, v\_state=Region Hovedstaden, v\_number=2HNYD18802H220755
- Total Rows:** Total rows: 49 of 49
- Completion Time:** Query complete 00:00:00.072
- Message Bar:** Ln 1, Col 52

## 2. Show all distinct customer with middle name

```
select distinct c.c_mname from vehicle.customer c
```

The screenshot shows a database query interface with the following details:

- Query Tab:** Contains the SQL query: `select distinct c.c_mname from vehicle.customer c`.
- Data Output Tab:** Displays the results of the query in a table format.
- Table Headers:** The column is labeled: `c_mname`.
- Table Data:** The table contains 196 rows of customer middle names. Some sample rows include:
  - Row 1: Meredith
  - Row 2: Goddard
  - Row 3: Bart
  - Row 4: Aluin
  - Row 5: Mohammed
  - Row 6: Andrew
  - Row 7: Monroe
  - Row 8: Barnebas
- Total Rows:** Total rows: 196 of 196
- Completion Time:** Query complete 00:00:00.076
- Message Bar:** Successfully run. Total query runtime: 76 msec. 196 rows affected.

### 3. List the all details of vehicle where model is greater than 2006

```
select * from vehicle.vehicle where v_model > '2006'
```

The screenshot shows a database interface with two main sections: 'Query' and 'Scratch Pad' at the top, and 'Data Output', 'Messages', and 'Notifications' below. In the 'Query' section, the following SQL code is entered:

```
1 select * from vehicle.vehicle where v_model > '2006'
```

In the 'Data Output' section, there is a table with the following columns and data:

	v_id [PK] integer	s_id integer	e_id integer	f_type character varying (30)	v_model character varying (20)	v_color character varying (20)	v_size character varying (20)	v_registration_date date	v_state character varying (50)	v_number character
1	4	4	4	liquid	2008	Red	3XL	2022-10-25	Île-de-France	1G6DAE
2	5	5	5	solid	2010	Yellow	XL	2022-03-14	[null]	WBALYI
3	6	6	6	liquid	2011	Khaki	XS	2022-03-26	[null]	1B3AZ6
4	7	7	7	solid	2009	Indigo	L	2021-12-16	[null]	5N1ANC
5	8	8	8	liquid	2012	Aquamarine	S	2022-03-19	[null]	2G4WS!
6	9	9	9	solid	2012	Fuscia	S	2022-06-05	[null]	WBAKF-
7	13	13	13	gas	2008	Goldenrod	XS	2022-05-29	[null]	WAULK
8	14	14	14	solid	2008	Purple	M	2022-04-15	[null]	1N6AF0

At the bottom of the 'Data Output' section, a green message box indicates: "Successfully run. Total query runtime: 82 msec. 85 rows affected.".

### 4. Find maximum and minimum salary of user whose role is staff

```
select max(s_salary),min(s_salary)from vehicle.staff
```

The screenshot shows a database interface with two main sections: 'Query' and 'Scratch Pad' at the top, and 'Data Output', 'Messages', and 'Notifications' below. In the 'Query' section, the following SQL code is entered:

```
1 select max(s_salary),min(s_salary)from vehicle.staff
```

In the 'Data Output' section, there is a table with the following columns and data:

	max integer	min integer
1	29965	10017

At the bottom of the 'Data Output' section, a green message box indicates: "Successfully run. Total query runtime: 158 msec. 1 rows affected.".

**5. Find the all details of manager whose salary is between 30000 and 36000 from manager table**

select \* from vehicle.manager where m\_salary between 30000 and 36000

The screenshot shows a database interface with a query editor and a data output viewer. The query editor contains the SQL command:

```
1 select * from vehicle.manager where m_salary between 30000 and 36000
```

The data output viewer displays the results of the query, which are 185 rows of manager information. The columns are:

m_id	m_name	m_age	m_address	m_mobileno	m_salary
2	Fara	8	4970 Vidon Street	1767109628	32920
36	Mervin	100	04588 Dawn Trail	510885896	32102
41	Rodge	24	699 Holmberg Court	264986180	31004
42	Duffy	3	1 Fairview Lane	7636466600	31868
43	Ilysa	53	70050 Center Point	3921728207	30351
45	Egbert	76	01 Troy Avenue	1097438805	33119
49	Noel	83	052 Karstens Park	1921117958	33219
50	Liane	3	153 Jenifer Way	477224466	32977

At the bottom of the data viewer, it says "Total rows: 185 of 185 Query complete 00:00:00.081". To the right, there is a green success message: "Successfully run. Total query runtime: 81 msec. 185 rows affected."

**6. Find the information of vehicle approver whose 2nd alphabet of l\_name is “o” and age are smaller than 50**

SELECT \* FROM vehicle.vehicle\_approver WHERE va\_name LIKE '\_o%' and va\_age < '50'

The screenshot shows a database interface with a query editor and a data output viewer. The query editor contains the SQL command:

```
1 SELECT * FROM vehicle.vehicle_approver WHERE va_name LIKE '_o%' and va_age < '50'
```

The data output viewer displays the results of the query, which are 12 rows of vehicle approver information. The columns are:

va_id	v_id	va_name	va_age	va_address	va_mobileno	va_email
16	16	Roseanne	33	6533 Northview Road	6223327897	rchiecof@devhub.com
21	21	Costanza	38	55536 Onsgard Junction	7745374006	cparsandk@artisteer.com
22	22	Corri	35	12 Golf Place	6602908316	chuett@about.me
55	55	Torey	33	562 Banding Center	5492191225	ttucsell11@google.cn
72	72	Torrine	41	21 Amoth Hill	3423182520	tmcmenamy1z@studiospress....
88	88	Cordula	26	1 Moose Lane	3263522809	covert21@ning.com
108	108	Rozelle	34	05 Moland Circle	9462619883	rholens2z@loomberg.com
146	146	Tore	41	46 Holy Cross Park	4735467939	tvittle41@simplemachines.org

At the bottom of the data viewer, it says "Total rows: 12 of 12 Query complete 00:00:00.061". To the right, there is a green success message: "Successfully run. Total query runtime: 61 msec. 12 rows affected."

## 7. Arrange manager id in descending order from manager table using order by clause

```
SELECT * FROM vehicle.manager ORDER BY m_id DESC
```

The screenshot shows a database interface with a query editor and a data output viewer. The query editor contains the SQL command: `SELECT * FROM vehicle.manager ORDER BY m_id DESC`. The data output viewer displays the results of the query, which consists of 1000 rows of data from the manager table. The columns are labeled: m\_id, m\_name, m\_age, m\_address, m\_mobileno, and m\_salary. The data includes various names like Vinni, Ingar, Merrick, Rriocard, Amberly, Val, Alfonse, and Sancho, along with their respective ages (e.g., 91, 9, 43, 88, 45, 97, 11, 54) and addresses. A green success message at the bottom right indicates the query was successfully run with a runtime of 63 msec and 1000 rows affected.

m_id	m_name	m_age	m_address	m_mobileno	m_salary
1	Vinni	91	275 Lakewood Gardens Pass	8662586805	35929
2	Ingar	9	70095 Amoth Court	6639474557	58254
3	Merrick	43	669 Monument Lane	6460987297	47695
4	Rriocard	88	799 O'Neill Court	539457728	43347
5	Amberly	45	4070 Bluestem Parkway	4357250862	47527
6	Val	97	1 Golf Junction	737815825	31074
7	Alfonse	11	4649 Hauk Way	3675690490	42446
8	Sancho	54	7383 Browning Road	5319828209	43955

## 8. Find average of age and show as "Avg Age" where user age is greater than 56

```
SELECT AVG(u_age) AS "Avg Age" FROM vehicle.user WHERE u_age > 56
```

The screenshot shows a database interface with a query editor and a data output viewer. The query editor contains the SQL command: `SELECT AVG(u_age) AS "Avg Age" FROM vehicle.user WHERE u_age > 56`. The data output viewer displays the results of the query, which shows a single row with the average age. The column is labeled "Avg Age" and has a value of 64.25833333333333. A green success message at the bottom right indicates the query was successfully run with a runtime of 53 msec and 1 row affected.

Avg Age
64.25833333333333

## 9. Count the total number of sensors by counting from sensor table

```
SELECT count(s.*) AS "Total sensor" FROM vehicle.sensor s
```

The screenshot shows a database interface with a query editor and a results viewer. The query editor contains the SQL statement: `SELECT count(s.*) AS "Total sensor" FROM vehicle.sensor s`. The results viewer displays a single row with the column 'Total sensor' having the value '10'. A status bar at the bottom indicates 'Total rows: 1 of 1' and 'Query complete 00:00:00.145'. A green success message says 'Successfully run. Total query runtime: 145 msec. 1 rows affected.'

Total sensor
10

## 10. Show all the sensor details having “working” status (where working = true)

```
select * from vehicle.sensor where s_status = 'true'
```

The screenshot shows a database interface with a query editor and a results viewer. The query editor contains the SQL statement: `select * from vehicle.sensor where s_status = 'true'`. The results viewer displays a table with 8 rows, each representing a sensor with its details: s\_id, s\_type, s\_material, s\_status, and s\_desc. The s\_status column for all rows is 'true'. A status bar at the bottom indicates 'Total rows: 8 of 8' and 'Query complete 00:00:00.112'. A green success message says 'Successfully run. Total query runtime: 112 msec. 8 rows affected.'

s_id [PK] integer	s_type character varying (50)	s_material character varying (50)	s_status boolean	s_desc character (100)
1	camera	titanium	true	xyz
2	Radar	aluminium	true	abc
3	LiDAR	pvc	true	mrp
4	Airflow	pps	true	ijk
5	Engine knock	pur	true	nml
6	speed	silicon	true	stu
7	Parking	gloss	true	peg
8	temperature	epoxy	true	ldu

**11. Show all detail of engine where engine power is less than 260 and engine rpm is less than 21000**

```
select * from vehicle.engine where e_rpm > '21000' and e_power < '260'
```

The screenshot shows a database query interface with the following details:

- Query Tab:** Contains the SQL query: `select * from vehicle.engine where e_rpm > '21000' and e_power < '260'`.
- Data Output Tab:** Displays the results of the query in a table format.
- Table Headers:** e\_id [PK] integer, e\_rpm integer, e\_speed integer, e\_power integer.
- Table Data:**

e_id	e_rpm	e_speed	e_power
1	25000	250	240
2	23000	230	220
3	26000	260	250
- Message Bar:** Shows "Total rows: 3 of 3" and "Query complete 00:00:00.085".
- Status Bar:** Shows a green success message: "Successfully run. Total query runtime: 85 msec. 3 rows affected."

**12. Find all the details of staff member where staff gender is female and salary is greater than 16000**

```
select * from vehicle.staff where s_gender = 'Female' and s_salary > '16000'
```

The screenshot shows a database query interface with the following details:

- Query Tab:** Contains the SQL query: `select * from vehicle.staff where s_gender = 'Female' and s_salary > '16000'`.
- Data Output Tab:** Displays the results of the query in a table format.
- Table Headers:** s\_id [PK] integer, s\_name character varying (20), s\_age integer, s\_gender character varying (15), s\_address character varying (50), s\_mobileno bigint, s\_salary integer.
- Table Data:**

s_id	s_name	s_age	s_gender	s_address	s_mobileno	s_salary
1	Cassandra	76	Female	622 Oak Valley Plaza	2283110041	23573
2	Trude	34	Female	760 Mallory Place	8543307465	19379
3	Sandy	67	Female	020 Chive Way	3298875643	24683
4	Serene	46	Female	07 Golf Parkway	4271478628	21205
5	Mechelle	55	Female	3798 Anniversary Point	1644857715	25492
6	Hanni	92	Female	6825 Morning Hill	7297899313	19189
7	Karin	74	Female	7937 Mendota Circle	8322305508	23631
8	Elizabet	52	Female	935 Eagan Parkway	87486725	25857
- Message Bar:** Shows "Total rows: 321 of 321" and "Query complete 00:00:00.103".
- Status Bar:** Shows a green success message: "Successfully run. Total query runtime: 103 msec. 321 rows affected."

### 13. Show all vehicle information where vehicle model number is latest from all vehicle

```
select * from vehicle.vehicle v where v.v_model in (select max(v_model) from vehicle.vehicle)
```

The screenshot shows a database interface with a query editor and a data output viewer. The query editor contains the SQL code for Question 13. The data output viewer displays a table with two rows of vehicle information. The columns are: v\_id, s\_id, e\_id, f\_type, v\_model, v\_color, v\_size, v\_registration, v\_state, and v\_number. The first row has v\_id=80, v\_model='2013', v\_color='Maroon', v\_size='3XL', and v\_number='WBAUC9C57BV664593'. The second row has v\_id=150, v\_model='2013', v\_color='Crimson', v\_size='2XL', and v\_number='2G4GN5EX2F9281554'.

v_id	s_id	e_id	f_type	v_model	v_color	v_size	v_registration	v_state	v_number
80	80	80	solid	2013	Maroon	3XL	2022-06-07	[null]	WBAUC9C57BV664593

### 14. Show detail of all service contractor where service contractor qualification is greater than equal to 11 and service contractor age is 35

```
select * from vehicle.service_contractor s where s.sc_qualification >= '11' and s.sc_age = '35'
```

The screenshot shows a database interface with a query editor and a data output viewer. The query editor contains the SQL code for Question 14. The data output viewer displays a table with 7 rows of service contractor information. The columns are: sc\_id, sc\_name, sc\_age, sc\_qualification, sc\_address, sc\_mobileno, and sc\_email. The rows are: (1, Emylee, 35, 11, 22539 Acker Park, 2761281829, ebaldwin@parallels.com), (2, Freddie, 35, 12, 2112 Lindbergh Parkway, 9375607453, fboyce1@cmu.edu), (3, Hugh, 35, 12, 51740 Utah Plaza, 5900118584, hmcgillicuddy1x@privacy.gov.au), (4, Shannon, 35, 12, 5309 Jenna Pass, 2034727908, sdillamore2e@hao123.com), (5, Karla, 35, 11, 06569 Michigan Alley, 9266374784, kmoyce6u@meetup.com), (6, Oona, 35, 12, 9597 Dexter Road, 5753856284, ogwytherhp@arstechnica.com), and (7, Hanslain, 35, 11, 2339 Bowman Junction, 3718984261, hgarrattleyil@photobucket.com).

sc_id	sc_name	sc_age	sc_qualification	sc_address	sc_mobileno	sc_email
1	Emylee	35	11	22539 Acker Park	2761281829	ebaldwin@parallels.com
2	Freddie	35	12	2112 Lindbergh Parkway	9375607453	fboyce1@cmu.edu

7	Hanslain	35	11	2339 Bowman Junction	3718984261	hgarrattleyil@photobucket.com

## 15. List out all customer details whose email id end with “.com”

select\* from vehicle.customer where c\_email LIKE '%.com'

The screenshot shows a database query interface with a query editor and a data output viewer.

**Query Editor:**

```
1 select* from vehicle.customer where c_email LIKE '%.com'
```

**Data Output:**

	c_id [PK] integer	v_id integer	c_fname character varying (20)	c_mname character varying (20)	c_lname character varying (20)	c_age integer	c_address character varying (50)	c_mobileno bigint	c_email character varying (50)
1	1	1	Waverly	Obidiah	Adrea	75	800 Utah Alley	3454873940	omccutcheon0@flickr.com
2		4	Modestine	Bryon	Shae	77	602 Arkansas Terrace	1510200304	bnajara3@webmd.com

7	13	13	Binky	Scarface	Rheba	57	41984 Basil Pass	8272908069	sshelshero@blogs.com
8		15	Babs	Antonv	Misty	74	056 Mcbride Place	9643753921	aleavve@quantcast.com

Total rows: 117 of 117    Query complete 00:00:00.060    Ln 1, Col 58

## 16. Find customer first name for all v\_id from `vehicle` & `customer` table.

SELECT v.v\_id , c.c\_fname FROM vehicle.vehicle v INNER JOIN vehicle.customer c ON  
v.v\_id = c.v\_id;

The screenshot shows a database query interface with a query editor and a data output viewer.

**Query Editor:**

```
1 SELECT v.v_id , c.c_fname FROM vehicle.vehicle v INNER JOIN vehicle.customer c ON
2 v.v_id = c.v_id;
3
```

**Data Output:**

	v_id integer	c_fname character varying (20)
1	1	Waverly
2	2	Arlina
3	3	Crystal
4	4	Modestine
5	5	Mikaela
6	6	Emelyne
7	7	Clem
8	8	Neale

Total rows: 200 of 200    Query complete 00:00:00.057    ✓ Successfully run. Total query runtime: 57 msec. 200 rows affected.

**17. Find Vehicle model for all the vehicle id from vehicle and vehicle approver table.**

```
SELECT va.v_id,v.v_model FROM vehicle.vehicle_approver va RIGHT JOIN vehicle.vehicle v  
ON va.v_id = v.v_id GROUP BY va.v_id,v.v_model
```

The screenshot shows a database interface with a query editor and a data output viewer. The query editor contains the SQL code for a right join. The data output viewer displays a table with columns v\_id and v\_model, showing 230 rows of data. The table has 8 visible rows:

v_id	v_model
1	2011
2	2007
3	2005
4	1995
5	1994
6	2010
7	2006

Total rows: 230 of 230 Query complete 00:00:00.055 Ln 1, Col 134

**18. Find vehicle color for all the Customer id from customer and vehicle table.**

```
SELECT c.c_id,v.v_color FROM vehicle.vehicle v LEFT JOIN  
vehicle.customer c ON c.v_id = v.v_id ORDER BY c.c_id
```

The screenshot shows a database interface with a query editor and a data output viewer. The query editor contains the SQL code for a left join. The data output viewer displays a table with columns c\_id and v\_color, showing 300 rows of data. The table has 8 visible rows:

c_id	v_color
1	Blue
2	Mauv
3	Goldenrod
4	Red
5	Yellow
6	Khaki
7	Indigo

Total rows: 300 of 300 Query complete 00:00:00.055 ✓ Successfully run. Total query runtime: 55 msec. 300 rows affected. 1

**19. find vehicle approver details i.e id, name and email of all the vehicle approver from vehicle and vehicle approver table.**

```
SELECT v.v_id, va.va_name, va.va_email  
FROM vehicle.vehicle_approver va RIGHT OUTER JOIN vehicle.vehicle v ON v.v_id = va.v_id  
ORDER BY va.va_email
```

The screenshot shows a database query interface with the following details:

- Query Tab:** Contains the SQL code: `SELECT v.v_id, va.va_name, va.va_email FROM vehicle.vehicle_approver va RIGHT OUTER JOIN vehicle.vehicle v ON v.v_id = va.v_id ORDER BY va.va_email`.
- Data Output Tab:** Displays the results of the query in a table format. The columns are `v_id`, `va_name`, and `va_email`. The data consists of 300 rows, each containing a unique ID, a name, and an email address.
- Status Bar:** Shows "Total rows: 300 of 300" and "Query complete 00:00:00.070".
- Message Bar:** Shows a green success message: "Successfully run. Total query runtime: 70 msec. 300 rows affected."

**20. Find out all detail of fuel and engine together.**

```
select * from vehicle.fuel f inner join vehicle.engine e on f.f_id = e.e_id
```

The screenshot shows a database query interface with the following details:

- Query Tab:** Contains the SQL code: `select * from vehicle.fuel f inner join vehicle.engine e on f.f_id = e.e_id`.
- Data Output Tab:** Displays the results of the query in a table format. The columns are `f_id`, `f_type`, `f_quality`, `f_density`, `f_material`, `e_id`, `e_rpm`, `e_speed`, and `e_power`. The data consists of 3 rows, each representing a combination of fuel and engine details.
- Status Bar:** Shows "Total rows: 3 of 3" and "Query complete 00:00:00.049".
- Message Bar:** Shows a green success message: "Successfully run. Total query runtime: 49 msec. 3 rows affected."

**21. find service contractor name, qualification and email id for all the user id from service contractor and user table.**

```
SELECT v.u_id, sc.sc_name, sc.sc_qualification, v.u_email FROM vehicle.user v LEFT  
OUTER JOIN vehicle.service_contractor sc ON  
v.sc_id = sc.sc_id ORDER BY v.u_email;
```

The screenshot shows a database interface with two tabs: "Query" and "Scratch Pad". The "Query" tab contains the SQL code. The "Data Output" tab displays the results of the query. The results are a table with four columns: u\_id, sc\_name, sc\_qualification, and u\_email. There are 300 rows of data. A message at the bottom right indicates the query was successfully run and completed in 62 msec with 300 rows affected.

	u_id	sc_name	sc_qualification	u_email
1	107	Randall	10	aagron2y@canalblog.com
2	287	Rowe	10	abeels7y@plala.or.jp
3	296	Alexandre	10	aburbudge87@upenn.edu
4	266	Torey	10	aconverv7d@miltbelan.gov.cn
5	47	Huey	11	adavidove1a@europa.eu
6	182	Germana	12	adominique51@naver.com
7	222	Sigismondo	12	adowner65@scientificamerican.com
8	116	Kamillah	12	agilffillan37@who.int

Total rows: 300 of 300    Query complete 00:00:00.062    ✓ Successfully run. Total query runtime: 62 msec. 300 rows affected.

**22. find count of duplicate row in vehicle color from vehicle table**

```
Select v.v_color, count (v_color) from vehicle.vehicle v  
Group by v.v_color Having count (v.v_id) < '100'  
Order by count (v.v_color) desc;
```

The screenshot shows a database interface with two tabs: "Query" and "Scratch Pad". The "Query" tab contains the SQL code. The "Data Output" tab displays the results of the query. The results are a table with two columns: v\_color and count. There are 19 rows of data. A message at the bottom right indicates the query was successfully run and completed in 87 msec with 19 rows affected.

	v_color	count
1	Purple	25
2	Aquamarine	21
3	Yellow	21
4	Khaki	20
5	Crimson	20
6	Puce	19
7	Red	17
8	Fuscia	16

Total rows: 19 of 19    Query complete 00:00:00.087    ✓ Successfully run. Total query runtime: 87 msec. 19 rows affected.

**23. Show all customer detail whose middle name is not start with 'a'.**

```
SELECT * FROM vehicle.customer WHERE c_mname NOT LIKE 'A%';
```

The screenshot shows a database query interface with two tabs: "Query History" and "Scratch Pad". The "Query History" tab contains the executed SQL query: "SELECT \* FROM vehicle.customer WHERE c\_mname NOT LIKE 'A%'". The "Data Output" tab displays the results of the query, which consists of 186 rows from the "customer" table. The columns shown are: c\_id, v\_id, c\_fname, c\_mname, c\_lname, c\_age, c\_address, c\_mobileno, and c\_email. The results show various customer details, such as Adrea, Alaster, Rodi, Shae, Husain, Giulio, Cherlynn, and Madison. A green status bar at the bottom right indicates the query was successfully run and completed in 110 msec with 186 rows affected.

c_id	v_id	c_fname	c_mname	c_lname	c_age	c_address	c_mobileno	c_email
1	1	Waverly	Obidiah	Adrea	75	800 Utah Alley	3454873940	omcutcheon0@flickr.com
2	2	Arlina	Traver	Alaster	44	652 Park Meadow Park	4079980086	treicharz1@jugem.jp

**24. Show information of fuel type and vehicle id arrange by vehicle model.**

```
SELECT f.f_type, v.v_id  
FROM vehicle.fuel f  
FULL OUTER JOIN vehicle.vehicle v ON v.f_id = f.f_id  
ORDER BY v.v_model;
```

The screenshot shows a database query interface with two tabs: "Query History" and "Scratch Pad". The "Query History" tab contains the executed SQL query: "SELECT f.f\_type, v.v\_id FROM vehicle.fuel f FULL OUTER JOIN vehicle.vehicle v ON v.f\_id = f.f\_id ORDER BY v.v\_model;". The "Data Output" tab displays the results of the query, which consists of 303 rows from the "fuel" and "vehicle" tables. The columns shown are: f\_type and v\_id. The results show various fuel types like gas, diesel, and electric, paired with vehicle IDs. A green status bar at the bottom right indicates the query was successfully run and completed in 110 msec with 303 rows affected.

f_type	v_id
[null]	280
[null]	142
[null]	59
[null]	9
[null]	80
[null]	150
gas	[null]

## 25. Find information of vehicle state, registration and count arrange by vehicle state.

```
SELECT v.v_state,v.v_registration,
COUNT(*) FROM vehicle.vehicle v
GROUP BY v.v_state,v.v_registration ORDER BY v.v_state ASC;
```

	v_state	v_registration	count
1	Alberta	2022-02-13	1
2	Alberta	2022-01-01	1
3	Aveiro	2022-10-05	1
4	Basse-Normandie	2022-04-05	1
5	Bourgogne	2022-09-26	1
6	Braga	2021-12-08	1
7	Budapest	2022-04-02	1
8	Campania	2022-02-19	1

Total rows: 228 of 228    Query complete 00:00:00.231    Successfully run. Total query runtime: 231 msec. 228 rows affected.

## 26. Find vehicle all detail which has 3<sup>rd</sup>,4<sup>th</sup> and 5<sup>th</sup> highest engine speed.

```
SELECT * FROM vehicle.vehicle as v,vehicle.engine as e
WHERE v.e_id = e.e_id
ORDER BY e.e_speed DESC OFFSET 2 ROW FETCH NEXT 3 ROW ONLY;
```

	v_id	s_id	e_id	f_type	v_model	v_color	v_size	v_registration	v_state	v_number	e_id	e_rpm	e_speed	e_power
1	6	6	6	liquid	2011	Khaki	XS	2022-03-26	[null]	1B3AZ6J...	6	26000	260	250

3	3	3	3	liquid	2006	Goldenrod	M	2022-06-25	[null]	WAUKH7...	3	23000	230	220

Total rows: 3 of 3    Query complete 00:00:00.086    Ln 5, Col 1

**27. List customer first name , middle name, last name whose vehicle model is between 2000 and 2010.**

```
SELECT c.c_fname,c.c_mname,c.c_lname  
FROM vehicle.customer AS c  
WHERE c.v_id IN (SELECT v.v_id  
                  from vehicle.vehicle as v  
                  WHERE v.v_model > '2000' AND v.v_model < '2010');
```

The screenshot shows a database interface with a query editor and a results viewer. The query editor contains the SQL code provided above. The results viewer displays a table with three columns: c\_fname, c\_mname, and c\_lname. The data consists of 73 rows, each containing a first name, middle name, and last name. A message at the bottom right indicates the query was successfully run and completed in 148 msec with 73 rows affected.

	c_fname	c_mname	c_lname
1	Waverly	Obidiah	Adrea
2	Crystal	Mohammed	Rodi
3	Modestine	Bryon	Shae
4	Clem	Ford	Cherilynn
5	Shelby	Rodney	Michele
6	Kylie	Tuckie	Debee
7	Maurits	Saunderson	Randy
8	Binky	Scarface	Rheba

Total rows: 73 of 73    Query complete 00:00:00.148    ✓ Successfully run. Total query runtime: 148 msec. 73 rows affected. X

**28. Find out the customer details whose vehicle's speed and parking sensor is active.**

```
select c.c_fname  
from vehicle.customer as c natural join vehicle.vehicle as v  
where v.s_id IN (select s.s_id  
                  from vehicle.vehicle as v natural join vehicle.sensor as s  
                  where s.s_status = 'true' AND s.s_type = 'speed' OR s.s_type = 'Parking');
```

The screenshot shows the Oracle SQL Developer interface. The top section is the 'Query' tab with the executed SQL code. The bottom section is the 'Data Output' tab, which displays the results of the query:

c_fname
Clem
Neale

Below the table, the status bar indicates "Total rows: 2 of 2" and "Query complete 00:00:00.081". A green success message at the bottom right says "Successfully run. Total query runtime: 81 msec. 2 rows affected."

**29. Find vehicle approver name who approved vehicle which vehicle's fuel quality is bad.**

```
select va.va_name  
from vehicle.vehicle_approver as va NATURAL JOIN vehicle.customer as c  
where c.v_id IN (select v.v_id  
                  from vehicle.vehicle as v natural join vehicle.fuel as f  
                  where f.f_quality = 'bad');
```

The screenshot shows the Oracle SQL Developer interface. The top section is the 'Query' tab with the executed SQL code. The bottom section is the 'Data Output' tab, which displays the results of the query:

va_name
Joceline
Erskine
Nicolis
Fania
Lucila
Talbot
Roseanne
Arabella

Below the table, the status bar indicates "Total rows: 70 of 70" and "Query complete 00:00:00.082". A green success message at the bottom right says "Successfully run. Total query runtime: 82 msec. 70 rows affected."

### 30. Find out total sum of manager and staff salary whose age is greater than 50.

```
select count('m.m_salary')
from vehicle.manager as m natural join vehicle.staff as s
where s.s_age > '50' and m.m_age > '50';
```

The screenshot shows a database query editor interface. The query window contains the following SQL code:

```
1 select count('m.m_salary')
2 from vehicle.manager as m natural join vehicle.staff as s
3 where s.s_age > '50' and m.m_age > '50';
4
```

The results pane shows a single row of data:

count	bigint
1	319957

At the bottom of the interface, there is a message bar indicating: "Total rows: 1 of 1 Query complete 00:00:00.083" and a success message: "Successfully run. Total query runtime: 83 msec. 1 rows affected."

### 31. Find all detail of the staff who earn more than the average salary in staff department

```
SELECT *
FROM vehicle.staff as s
WHERE s.s_salary <
      (SELECT AVG(s.s_salary)
       FROM vehicle.staff as s);
```

The screenshot shows a database query editor interface. The query window contains the following SQL code:

```
1 SELECT *
2 FROM vehicle.staff as s
3 WHERE s.s_salary <
4      (SELECT AVG(s.s_salary)
5       FROM vehicle.staff as s);
6
```

The results pane displays a table of staff details:

	s_id	s_name	s_age	s_gender	s_address	s_mobileno	s_salary
1	1	Abramo	86	Male	18256 Golf Way	2821410247	10151
2	3	Yovonna	28	Female	76 Sloan Crossing	1146090773	13604
3	4	Trude	34	Female	760 Mallory Place	8543307465	19379
4	7	Doloritas	91	Female	3 Northview Center	4226092392	14354
5	8	Harris	32	Male	4 Stephen Lane	9559988743	14820
6	9	Fania	74	Female	93617 Brentwood Drive	7965220970	15875
7	11	Hanni	92	Female	6825 Morning Hill	7297899313	19189
8	12	Albrecht	76	Male	1124 Colorado Hill	1032432012	19032

At the bottom of the interface, there is a message bar indicating: "Total rows: 514 of 514 Query complete 00:00:00.355" and a success message: "Successfully run. Total query runtime: 355 msec. 514 rows affected."

**32. List of all user name and count of vehicle approve with the number of related vehicle approver.**

```
SELECT u.u_name, COUNT(va.va_id) AS no_of_vehicleapprover
FROM vehicle.user as u
LEFT JOIN vehicle.vehicle_approver as va ON u.va_id = va.va_id
GROUP BY u.u_id, u.u_name
ORDER BY u.u_name ASC;
```

The screenshot shows a database query interface with two tabs: "Query" and "Scratch Pad". The "Query" tab contains the SQL code provided above. The "Data Output" tab displays the results of the query in a table format. The table has two columns: "u\_name" and "no\_of\_vehicleapprover". The data shows 300 rows, each corresponding to a user name and their count of vehicle approvals. The "no\_of\_vehicleapprover" column is consistently 0 for all users listed. A message at the bottom right indicates the query was successfully run and completed in 342 msec with 300 rows affected.

u_name	no_of_vehicleapprover
Abbey	0
Abel	1
Adda	0
Adelbert	0
Adolphe	1
Alane	0
Aldridge	0
Aldridge	0

Total rows: 300 of 300    Query complete 00:00:00.342    ✓ Successfully run. Total query runtime: 342 msec. 300 rows affected.

### 33. Show how many vehicle approver and service provider connected to eachother.

```
SELECT sc.sc_id,va.va_id,COUNT(u.u_id) AS connected  
from vehicle.service_contractor as sc  
INNER JOIN vehicle.user as u ON sc.sc_id = u.sc_id  
INNER JOIN vehicle.vehicle_approver AS va ON u.va_id = va.va_id  
GROUP BY  
sc.sc_id, va.va_id;
```

The screenshot shows a database query interface with two tabs: 'Query' and 'Scratch Pad'. The 'Query' tab contains the SQL code provided above. The 'Data Output' tab displays a table with three columns: 'sc\_id', 'va\_id', and 'connected'. The data shows 200 rows where each row has a value of 1 in the 'connected' column. A status bar at the bottom indicates 'Total rows: 200 of 200' and 'Query complete 00:00:00.071'. A green message box says 'Successfully run. Total query runtime: 71 msec. 200 rows affected.'

sc_id	va_id	connected
1	113	113
2	172	172
3	107	107
4	25	25
5	127	127
6	175	175
7	55	55
8	1	1

### 34. Get 3 Highest salaries and manager name from manager table.

```
select distinct m_salary, m_name  
from vehicle.manager a  
where 3 >= (select count(distinct m_salary)  
            from vehicle.manager b  
            where a.m_salary <= b.m_salary)  
order by a.m_salary desc;
```

The screenshot shows a database query interface with two tabs: 'Query' and 'Scratch Pad'. The 'Query' tab contains the SQL code provided above. The 'Data Output' tab displays a table with two columns: 'm\_salary' and 'm\_name'. The data shows 3 rows with values: 59981 (Mendie), 59893 (Genia), and 59891 (Halette). A status bar at the bottom indicates 'Total rows: 3 of 3' and 'Query complete 00:00:00.296'. A green message box says 'Successfully run. Total query runtime: 296 msec. 3 rows affected.'

m_salary	m_name
59981	Mendie
59893	Genia
59891	Halette

### 35. Display first 50% records from customer table

```
select *
from vehicle.customer
where c_id <= (select count(*)/2
                 from vehicle.customer);
```

The screenshot shows a database interface with two main panes. The top pane is the 'Query' editor containing the SQL code. The bottom pane is the 'Data Output' viewer displaying the results of the query.

```
Query   Query History
1 select *
2 from vehicle.customer
3 where c_id <= (select count(*)/2
4                   from vehicle.customer);
5
```

Data Output

c_id	v_id	c_fname	c_mname	c_lname	c_age	c_address	c_mobileno	c_email
1	1	Waverly	Obidiah	Adrea	75	800 Utah Alley	3454873940	omccutcheon0@flickr.com
2	2	Arlina	Traver	Alaster	44	652 Park Meadow Park	4079980086	treicharz1@jugem.jp
3	3	Crystal	Mohammed	Rodi	77	6468 Texas Pass	534388485	mshakespeare2@tuttocitta.it
4	4	Modestine	Bryon	Shae	77	602 Arkansas Terrace	1510200304	bnajara3@webmd.com
5	5	Mikaela	Norton	Husain	74	71 Warner Parkway	1526624443	nofergus4@dailymail.co.uk
6	6	Emelyne	Rowland	Giulio	37	2 Shopko Alley	9178997593	rbanasik5@walmart.com
7	7	Clem	Ford	Cherilynn	75	56155 Dakota Place	1950937143	flowthian6@cornell.edu
8	8	Neale	Rockwell	Madison	78	59 Clove Circle	9348647482	rbridden7@weebly.com

Total rows: 100 of 100    Query complete 00:00:00.092    ✓ Successfully run. Total query runtime: 92 msec. 100 rows affected. [X] 1

### 36. Write a query to retrieve the last 3 records from the user table.

```
SELECT *
FROM vehicle.user as u
WHERE u.u_id <=3 UNION SELECT * FROM
(SELECT *
FROM vehicle.user u1 ORDER BY u1.u_id DESC)
AS u2 WHERE u2.u_id <=3;
```

The screenshot shows a database interface with two main panes. The top pane is the 'Query' editor containing the SQL code. The bottom pane is the 'Data Output' viewer displaying the results of the query.

```
Query   Query History
1 SELECT *
2 FROM vehicle.user as u
3 WHERE u.u_id <=3 UNION SELECT * FROM
4 (SELECT *
5   FROM vehicle.user u1 ORDER BY u1.u_id DESC)
6 AS u2 WHERE u2.u_id <=3;
```

Data Output

u_id	sc_id	va_id	u_name	u_age	u_street	u_city	u_state	u_mobileno	u_email
1	2	2	Eveleen	48	Duke	Beauvais	Picardie	6418670337	ebiasi1@npr.org
2	3	3	Chan	63	Eastwood	Tagawa	[null]	6502087922	cdoldon2@eBay.co.uk
3	1	1	Gerick	33	Commercial	Nungga	[null]	3601892790	gcondello@va.gov

Total rows: 3 of 3    Query complete 00:00:00.134    ✓ Successfully run. Total query runtime: 134 msec. 3 rows affected. [X] 6

### 37. Fetch only odd tuple from customer table.

```
SELECT c_id, c_fname, c_age
FROM (SELECT *, Row_Number() OVER(ORDER BY c.c_id) AS RowNumber
      FROM vehicle.customer AS c) E
WHERE E.RowNumber % 2 = 1;
```

The screenshot shows the Oracle SQL Developer interface. The top pane contains the SQL query:1 SELECT c\_id, c\_fname, c\_age
2 FROM (SELECT \*, Row\_Number() OVER(ORDER BY c.c\_id) AS RowNumber
3 FROM vehicle.customer AS c) E
4 WHERE E.RowNumber % 2 = 1;
5The bottom pane displays the results of the query, which shows 100 rows of customer data. The columns are c\_id, c\_fname, and c\_age. The data includes rows 1 through 15. A message bar at the bottom right indicates "Successfully run. Total query runtime: 79 msec. 100 rows affected."

c_id	c_fname	c_age
1	Waverly	75
3	Crystal	77
5	Mikaela	74
7	Clem	75
9	Garrick	30
11	Kylie	70
13	Binky	57
15	Babs	74

### 38. Show vehicle detail which vehicle's sensor is not working.

```
select *
from vehicle.vehicle as v
where v.v_id in (select s_id
                  from vehicle.sensor as s
                  where s.s_status='false');
```

The screenshot shows the Oracle SQL Developer interface. The top pane contains the SQL query:1 select \*
2 from vehicle.vehicle as v
3 where v.v\_id in (select s\_id
4 from vehicle.sensor as s
5 where s.s\_status='false');
6The bottom pane displays the results of the query, which shows 2 rows of vehicle details. The columns are v\_id, s\_id, e\_id, f\_type, v\_model, v\_color, v\_size, v\_registration, v\_state, and v\_number. The data includes rows 3 and 10. A message bar at the bottom right indicates "Successfully run. Total query runtime: 71 msec. 2 rows affected."

v_id	s_id	e_id	f_type	v_model	v_color	v_size	v_registration	v_state	v_number
3	3	3	liquid	2006	Goldenrod	M	2022-06-25	[null]	WAUKH78I
10	10	10	gas	2004	Green	3XL	2021-11-25	Södermanland	1D7RB1CT

**39. Select vehicle number , model and vehicle id of all large size vehicle.**

```
select v_number, v_model , v_id  
from vehicle.vehicle as v  
where v.v_size = '3XL';
```

The screenshot shows the Oracle SQL Developer interface. The top window is titled "Query" and contains the SQL code for selecting vehicle details. The bottom window is titled "Data Output" and displays the results of the query, which lists 37 rows of vehicle information. A status bar at the bottom right indicates the query was successfully run with a runtime of 122 msec and 37 rows affected.

v_number	v_model	v_id
1G6DA8EGXA0502277	2008	4
1D7RB1CT4AS013259	2004	10
1FTEW1CWAK537687	2000	27
3NTCN1AP1EK282395	1995	46
1ZVBP8AM9D5205374	2010	47
1C3CCBCG6DN924996	1999	58
5FNWF3H28DB736796	1995	61
WBACU9C57BV664593	2013	80

**40. Find the second highest salary of a staff member(without using a limit).**

```
select max(s_salary)  
from vehicle.staff as s  
where s.s_salary <> (select max(s_salary)  
                      from vehicle.staff);
```

The screenshot shows the Oracle SQL Developer interface. The top window is titled "Query" and contains the SQL code for finding the second highest staff salary. The bottom window is titled "Data Output" and displays the results of the query, which shows a single row with the value 29922. A status bar at the bottom right indicates the query was successfully run with a runtime of 385 msec and 1 row affected.

max
29922
